

PROTOCOLS FOR ARIZONA SCHOOL DISTRICTS REGARDING ACTION STEPS UPON POSSIBLE COVID-19 EXPOSURE

Prepared by

Gust Rosenfeld, P.L.C. Robert Haws, Esq. Susan Segal, Esq. Jennifer MacLennan, Esq. Carrie O'Brien, Esq. Brittany Reed, Esq. Hufford, Horstman, P.C. Patrice Horstman, Esq. C. Benson Hufford, Esq.

The purpose of this communication is to provide information to Arizona School Risk Retention Trust, Inc. (the Trust) members on reporting requirements and best practices if an employee, student or member of a district's community has been diagnosed, exposed to, or has symptoms of COVID-19. Please contact the Trust or local counsel if your District would like legal advice.

GOALS

Reduce transmission; continue to serve the community; maintain a healthy work environment; and comply with reporting requirements.

INITIAL CONSIDERATIONS

Promote a policy of disclosure of symptoms; encourage employees to stay home if they are sick; and practice appropriate industrial hygiene.

In this document, you will find:

<u>SUSPECTED COVID-19 INFECTION – EMPLOYEE</u> <u>SUSPECTED COVID-19 INFECTION – STUDENT OR PARENT</u> <u>REPORTING AND NOTIFICATION</u>

Mandatory Reporting Notifying Co-workers and the Public Notification if the Individual is a Student or Parent Notification Basics Removal from the Workplace or School Site

INDUSTRIAL HYGIENE

SUSPECTED COVID-19 INFECTION – EMPLOYEE

Policy GBGCB grants the Superintendent the authority "to take reasonable and lawful measures to protect students and staff member from the transmission of communicable diseases." A district may exclude an employee from working onsite if they have a communicable disease "if the staff member presents a direct threat to the health or safety of others in the school workplace." Therefore, if a district is notified that an employee, volunteer, contractor, subcontractor or other onsite individual has been diagnosed, exposed to, or has symptoms of COVID-19, the district may:

- 1. Immediately isolate the individual, if the individual remains in the workplace. Follow protocol for contact with someone who is ill, including removing them from the school environment safely and interacting with them with appropriate physical protective equipment (PPE).
- 2. Send the individual home immediately to self-quarantine.
- 3. Begin to determine which other employees or students have had "close contact" with the individual so as to make informed decisions regarding next steps. The Center for Disease Control defines "close contact" as someone who was within six (6) feet of an infected person for at least 15 minutes starting from two (2) days before illness onset (or, for asymptomatic patients, two (2) days prior to specimen collection) until the time the patient is isolated: https://www.cdc.gov/coronavirus/2019-ncov/php/contact-tracing
- 4. Investigate the matter by telephonically interviewing the individual.¹ Suggested interview questions:
 - a. Have you been diagnosed with COVID-19?
 - b. Do you have symptoms of COVID-19 as listed by the CDC? If yes, for how long? (Limit questions to COVID-19 and not other health conditions.)
 - c. Have you been in close contact with an individual diagnosed, exposed to or who has symptoms of COVID-19?
 - d. Who at the district have you had close contact within the two days prior to symptoms or specimen collection?
 - e. What district sites have you been to within the two days prior to symptoms or specimen collection?

¹ An employee must not be discriminated against for having COVID-19 or refusing to answer questions regarding their possible exposure, diagnosis, or symptoms of COVID-19. If the individual is unwilling or unable to participate in the interview, operate under the presumption that there is a possible COVID-19 exposure.

- f. Have you had any physical contact with products that were distributed to district constituents (e.g., lunches, learning packets, etc.)?
- 5. Assess possible exposure
 - a. Assess who may have had contact with the individual in the two days prior to symptoms or specimen collection; and
 - b. Assess which district sites may need to be sanitized or temporarily closed. See <u>Industrial Hygiene section</u> for more information.
- 6. Determine who should receive notice of potential COVID-19 exposure. See <u>Reporting and Notification section</u> for more information.
- 7. All information collected during the interview should be maintained in a separate employee medical file and not in the employee's personnel file.
- 8. The district may assign the individual telework if that is a possibility. If the employee is unable to telework, they may qualify for paid emergency sick leave under the Families First Coronavirus Response Act ("FFCRA"). See The Trust's FAQ on FFCRA for more information: <u>https://www.svc.the-trust.org/publicfiles/Legal%20Research%20and%20Findings%20Families%20Families%20Findings%20Families%20Findings%20Families%20Findings%20Families%20Findings%20Families%20Findings%20Families%20Findings%20Families%20Findings%20Families%20Findings%20Families%20Findings%20Findings%20Families%20Findings%20Findin</u>
- 9. The district is obligated to record cases of COVID-19 as an occupational illness pursuant to 29 CFR Part 1904. OSHA has released revised guidance on May 19, 2020 regarding the limited investigation that employers must conduct in order to make a reasonable determination of whether the illness is work related. The district is not required to undertake extensive medical inquiry but must ask the employee how he or she believes they contracted COVID-19, discuss outside activities, and review work environment. The guidance provides examples of when it may be reasonable to determine that the illness was contracted at work: https://www.osha.gov/memos/2020-05-19/revised-enforcement-guidance-recording-cases-coronavirus-disease-2019-covid-19

SUSPECTED COVID-19 INFECTION - STUDENT OR PARENT

- 1. Follow protocol re: isolation and transport of student, if at school. If a student develops COVID-19 symptoms at school, separate the student from all other students and staff, with the exception of one staff member to supervise the student. This staff member will wear PPE or a cloth face covering and will maintain a distance of at least 6 feet from the students at all times, unless there is an emergency. Staff will immediately notify a parent or emergency contact to pick up the student and will call 911 if the student appears to be in medical distress.
- 2. Attempt to communicate with the parent. The district may call the parent to discuss possible exposure. If they are not reachable or decline to discuss the

matter, cease all investigations and operate under the presumption that there is a possible COVID-19 exposure.

- 3. Assess possible exposure.
 - a. Assess who may have had contact with the individual or their family in the two days prior to symptom onset; and
 - b. Assess which district sites may need to be sanitized or temporarily closed. See <u>Industrial Hygiene section</u> for more information.
- 4. Determine who should receive notice of potential COVID-19 exposure. See next section on Reporting and Notification for more information.

REPORTING AND NOTIFICATION

The Americans with Disabilities Act ("ADA"), Family Educational Rights and Privacy Act ("FERPA"), and the Health Insurance Portability and Accountability Act ("HIPAA") should be considered in any district disclosure of possible COVID-19 infection. In each instance, a district should maintain all information as a confidential medical record and should only disclose relevant non-identifying information to those individuals that the district is permitted to provide notice. The Arizona Attorney General's office has issued recent guidance on this issue: <u>https://www.azag.gov/sites/default/files/2020-03/I20-005.pdf</u>.

Mandatory Reporting

According to the Arizona Attorney General, a school district is not required to report a possible COVID-19 infection to health authorities under A.R.S. § 36-621.² A district may report a case of COVID-19 to the appropriate board of health or the Arizona Department of Health. In doing so, the district should evaluate whether the disclosure falls under the emergency health and safety exception under FERPA.³

The Arizona Department of Health Services (ADHS) has recommended that districts report know cases to the county health department. ADHS has also established a COVID-19 hotline at 1-844-542-8201.

² Arizona Attorney General Opinion, No. I20-005 (March 27, 2020): <u>https://www.azag.gov/sites/default/files/2020-03/I20-005.pdf</u>.

³ Analysis of disclosure of student information during an emergency/disaster issued in June 2010 by the

Notifying Co-workers and the Public

If an employer receives notification that an employee, contractor, volunteer, or other individual working on a district's site has a confirmed COVID-19 infection, the CDC recommends that the employer "inform fellow employees of their possible exposure to COVID-19 in the workplace but maintain the confidentiality of the affected individual as required by the Americans with Disabilities Act (ADA). The fellow employees should then self-monitor for symptoms (i.e., fever, cough, or shortness of breath)."⁴ See also Policy GBGCB.

Similarly, a district may notify its community that they may have been exposed to COVID-19 through their interactions with the district. The same procedure can apply for a contractor, volunteer, or other individual associated with a district. The district must maintain confidentiality at all times, and is prohibited from providing any information that would identify the affected individual. If the individual involved is a subcontractor or employed by another entity, the district should also inform their employer immediately.

Notification if the Individual is a Student or Parent

A student's possible exposure to COVID-19 should be treated as a student record subject to FERPA. Specifically, the Arizona Attorney General suggests "given the current health emergency, [educational institutions] should apply the FERPA/HIPAA exceptions and disclose sufficient information related to positive COVID-19 cases so those potentially affected students, staff, visitors, etc. can self-monitor and potentially self-quarantine. At a minimum, [educational institutions] should disclose information identifying the [district sites] frequented by the infected student during the incubation period and/or while exhibiting symptoms . . . Further, warning other students, parents of students, school staff, and others about potential contact with an affected student is appropriate when, as here, those persons' knowledge is "necessary to protect the health or safety of the student or other individuals."⁵ See also Policy GBGCB.

Therefore, if a student has suspected COVID-19 exposure, it is appropriate to notify "appropriate parties" of possible exposure. **The media is not an "appropriate party."**⁶ The district may also provide notice to appropriate parties if a parent or other member of

⁴ Centers for Disease Control and Prevention, *Interim Guidance for Businesses and Employers*: <u>https://www.cdc.gov/coronavirus/2019-ncov/community/guidance-business-response.html</u>. (Last visited April 1, 2020).

⁶ U.S. Dept. of Educ., Privacy FAQ at 5 (March 2020): <u>https://studentprivacy.ed.gov/sites/default/files/resource_document/file/FERPA%20and%20Coronavirus%2</u> <u>OFrequently%20Asked%20Questions.pdf</u>.

the student's household has a suspected COVID-19 exposure so they may self-monitor and self-quarantine.

Notifications must not disclose any personally identifiable information about the individual unless a FERPA exception applies.

Notification Basics

- The notice must not contain personally identifying information;
- The notice should only include non-identifying information that is relevant to allow those with potential exposure to self-monitor and self-quarantine;
- Only provide the notice to "appropriate parties;"
- The district may inform appropriate health officials as long as it complies with applicable privacy laws;
- The notification should include information about the district sites frequented by the individual during the incubation period and while exhibiting symptoms;
- The notification should include information on what the district is doing in regards to industrial hygiene, including whether the site will be closed and for how long; and
- The notification should encourage those individuals that may have been exposed to COVID-19 to self-monitor for symptoms and to self-quarantine if appropriate.

Removal from the Workplace or School Site

Districts will need to continue to make individual determinations about whether to require students or employees to quarantine after a workplace exposure. In general, districts should assess who had close contact with the infected individual (exposure for more than 15 minutes two (2) days prior to onset of symptoms or collection of specimen). The CDC has published guidance for what to do if the determination is made to continue to allow critical infrastructure employees to work after a potential exposure: https://www.cdc.gov/coronavirus/2019-ncov/community/critical-workers/implementing-safety-practices.html

INDUSTRIAL HYGIENE

If it has been confirmed that an infected individual was in the workplace, the CDC recommend that parties wait twenty-four (24) hours before entering to disinfect. All CDC guidance should be followed: <u>https://www.cdc.gov/coronavirus/2019-ncov/community/reopen-guidance.html</u>

Policy GBGCB grants the Superintendent the authority "to take reasonable and lawful measures to protect students and staff member from the transmission of communicable diseases." This includes requiring appropriate industrial hygiene practices before and following possible COVID-19 exposure. OSHA developed specific guidance,⁷ which includes:

- Maintain regular housekeeping practices, including routine cleaning and disinfecting of surfaces, equipment, and other elements of the work environment;
- Promote frequent and thorough hand washing;
- Provide soap and/or alcohol-based (at least 60%) hand sanitizer, tissues, disposable towels for workers to clean their work surfaces, and trash receptacles;
- Require social distancing at worksites;
- Assess whether personal protective equipment (PPE) is appropriate for individuals working onsite;
- Encourage "respiratory etiquette" which includes covering coughs and sneezes;
- Post mandatory reminders for workers to follow hygiene protocols;
- Restrict the number of people entering a previously contaminated area;
- Where appropriate, limit access to the worksite, or restrict access to only certain workplace areas;
- Consider strategies to minimize face-to-face contact (e.g., drive through windows, staggered work shifts, etc.);
- Discourage workers from using other workers' phones, desks, offices, or other work tools and equipment;
- Isolate individuals who have had close contact with an individual who has been diagnosed, exposed to, or has symptoms of COVID-19; and
- Temporarily close and sanitize a previously contaminated area. Cleaning chemicals should include Environmental Protection Agency (EPA)-approved disinfectant labels with claims against emerging viral pathogens which are expected to be effective against COVID-19.
